COMAP is pleased to announce the results of the 42nd annual Mathematical Contest in Modeling (MCM) and the 28th annual Interdisciplinary Contest in Modeling (ICM). Teams of three students had one weekend to research, model, and write a complete solution to an open-ended, real-world problem.

32,213 TOTAL TEAMS	28 COUNTRIES/REGIONS	6 PROBLEMS OFFERED	93,977 STUDENT PARTICIPANTS

PROBLEM E SUMMARY

For Problem E, teams were required to provide a model-based feasibility analysis around passive solar shading situations for both the retrofit of existing buildings and the construction of a new building. The buildings in question were located at two notional universities: one in a warm, low-latitude region with high solar exposure and increasingly frequent heat waves; and the other at a high latitude where winter temperatures remain below freezing for months, sunlight hours are limited, and buildings experience heavy heating demands. Teams wrote a letter to the university leadership at their choice of the two universities outlining the steps the university should take to include passive solar shading in both their retrofit and new building plans.
